

O22 First Month

History: A 10-year-old girl presenting with headache and fever. Take a focused history from the mother.

Diagnosis: Meningitis

Question by examiner: CSF results showed 800 WBCs, 90% neutrophils, glucose=30, protein >100. What kind of meningitis does the patient have based on these results? Justify your answer.

Answer: Bacterial meningitis

Physical Examination: Chest inspection and palpation.
